(54) Title: LOCATION-BASED TELECOMMUNICATIONS REDUNDANCY PROTOCOL

(57) Abstract: A protocol for location-based telecommunications redundancy, operable at a data-communications topology juncture having at least two telecommunications media thereat, and the protocol includes the steps of: (1) On the occurrence of a call-processing request from a caller to a recipient - e.g. using a last known present location of the recipient's mobile phone; and (2) Using the current location, second software at-the-juncture propagating the request to "ring" at two call-receiving devices closest to the current location - wherein one of the devices is a mobile telecommunications device of the recipient and the other of the devices is a terrestrial device of the recipient that is closest to the current location of the recipient.
